SUDOKU MADE SIMPLE

NUMBER PUZZLES. ZERO MATH REQUIRED.

Sudoku is a game of logic, not arithmetic. Your mission is to fill the empty squares with numbers 1 through 9.

RULE 1 | ROWS

Every horizontal row contains 1 through 9 exactly once.

RULE 2 | COLUMNS

Every vertical column contains 1 through 9 exactly once.

RULE 3 | BOXES

Every 3 x 3 box contains 1 through 9 exactly once.

THE WORDMAN TRICK

Ask: Which numbers are missing from this row, column, and box? If only one number fits, write it in!

No guessing. No racing. Just satisfying little victories.

YOUR FIRST 9 x 9 SUDOKU

Fill the blank squares. Every row, column, and bold-bordered 3 x 3 box needs the numbers 1 through 9, with no repeats.

5	3			7				
6			1	9	5			
	9	8					6	
8				6				3
4			8		3			1
7				2				6
	6					2	8	
			4	1	9			5
				8			7	9

YOU CAN DO THIS!

Begin with the rows, columns, or boxes that already have lots of numbers.

THE SOLUTION

Compare your finished grid with the answer below. A wrong square is just another chance to learn!

5	3	4	6	7	8	9	1	2
6	7	2	1	9	5	3	4	8
1	9	8	3	4	2	5	6	7
8	5	9	7	6	1	4	2	3
4	2	6	8	5	3	7	9	1
7	1	3	9	2	4	8	5	6
9	6	1	5	3	7	2	8	4
2	8	7	4	1	9	6	3	5
3	4	5	2	8	6	1	7	9

YOUR NEXT MOVE

Start easy, build confidence, then work your way up. Every finished puzzle is a small win!
